VITYARTHI: DIGITAL LITERACY

NAME: Megha Maniska Mohalik

REG. NO.-25BAI10509

Introduction

This project was done as part of the Digital Literacy course, where I took the role of a Student Digital Ambassador. The purpose of this project was to understand how digital tools are used in daily life and how students can build a responsible and professional online presence.

During this project, I worked on different tasks like creating an infographic, setting up online profiles, exploring coding platforms, writing professional emails, and studying cybercrime awareness. Each task helped me understand a different aspect of digital literacy.

This project also helped me realize that digital platforms are not only useful but also risky if not used carefully. Overall, it gave me a better understanding of how to use digital tools effectively and safely.

Task 1 – Infographic

For this task, I created a digital literacy infographic using Canva. The infographic mainly focused on explaining what digital literacy means, why it is important for students, and some basic safe internet practices. I tried to keep the content simple so that it is easy for anyone to understand.

I used headings, icons, and short points to make the design look clean and not too crowded. The goal was to make it visually appealing as well as informative at the same time.

One difficulty I faced was deciding what information to include because there was limited space. I initially added too much content, which made the design look messy. Later, I removed extra details and focused only on important points.

This task helped me understand how to present information in a clear and structured way. It also improved my design skills and taught me the importance of simplicity in communication.

Task 2 – Digital Portfolio

In this task, I created accounts on GitHub, LinkedIn, and Kaggle. These platforms are important for building a professional digital presence and showcasing skills.

GitHub is mainly used for uploading and managing projects. It helps in keeping track of work and sharing it with others. LinkedIn is useful for creating a professional profile and connecting with people in different fields. Kaggle is helpful for practicing data science and machine learning using real datasets.

Over the next four years, I plan to use GitHub to regularly upload my projects and improve my coding skills. On LinkedIn, I will try to build connections and stay updated with opportunities like internships. Kaggle will help me gain practical experience by working on datasets and participating in competitions.

This task made me realize that building a digital presence from the beginning is important and can be useful in the future.

Task 3 – Platforms

For coding practice, I used HackerRank and solved a beginner-level problem. This helped me understand basic programming logic and how to approach simple problems step by step.

I also created a Google Form titled “Digital Literacy Awareness Quiz” which included five questions related to online safety. The form contained both multiple-choice and short-answer questions. The responses were connected to Google Sheets, which made it easy to view and organize the data.

These tools are very useful for students. HackerRank helps in improving problem-solving skills, while Google Forms and Sheets are useful for collecting and analyzing information.

This task made me more comfortable using online platforms for both academic and practical purposes. It also showed me how these tools can be used to share knowledge with others.

Task 4 – Email & Etiquette

In this task, I wrote two professional emails and created a checklist for responsible social media use. I learned how important it is to maintain proper tone, structure, and clarity while writing emails.

I understood that even small mistakes like missing subject lines or using informal language can create a negative impression. The checklist helped me identify what should and should not be done while using social media.

Overall, this task improved my understanding of digital communication. It made me more aware of how to present myself in a professional way online and avoid common mistakes.

Task 5 – Cybercrime Awareness

While working on this task, I studied UPI fraud and how it affects people. I was surprised to see how easily people can be tricked through simple methods like fake calls, links, or payment requests.

Many scams do not require advanced technical skills but depend on creating urgency and confusion. This made me realize how important awareness is.

One habit I will personally change is being more careful while handling payment requests and links. Earlier, I did not always verify everything properly, but now I understand the risks involved.

This task made me more aware of online threats and the importance of staying alert.

Conclusion (≈100 words)

This project helped me understand the importance of digital literacy in today's world. I learned how to use different platforms, communicate professionally, and stay safe online.

It also showed me that even small mistakes can lead to serious problems, so being careful is very important. Each task gave me practical knowledge that I can use in my academic and personal life.

Overall, this project was a useful learning experience and helped me become more confident in using digital tools responsibly.
